MEMORANDUM FOR: Chief, Plans & Programs Branch, O/DD/S&T

SUBJECT   : Comments on DD/S&T Planning Structure

1. The following is suggested as the planning structure appropriate for this Office:

Category	Sub-Category	Element
Information Processing	- ADP Problem Analysis and Programming	- Intelligence Information Processing - Scientific Computation - Management Information Processing
	- ADP Systems	- ADP Hardware and Operations - ADP Software

2. The cleanest approach would be to include our functions under the Program-Wide category and Support Services sub-category. This apparently would not be bought by PPB.

3. Your proposal includes the word "analysis" in our category, but the breakout does not imply that it is as important as the word "processing." Since it might be confused with "Intelligence Analysis," I suggest that it be deleted.

4. The breakout I have suggested is very similar to the one used last year, but will be slightly closer to reality and will make our contribution easier to compare with last year's submission. As in the past, we would include OCS overhead under "ADP Systems."
